EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Hanna on 16 November 2006.

The application has been amended as follows:

- a.) On page 2, in paragraph [0004], replace the phrase, "that uses using" with "that uses".
- b.) On page 4, in paragraph [0010], line 3, replace the word, "signalis" with "signal is".
- c.) On page 8, paragraph [0032], line 2, replace the phrase "a receiver 100" with " a receiver 110".
- d.) On page 8, paragraph [0032], line 4, replace the phrase "comma detector 100" with " a comma detector 192".
- e.) On page 13, paragraph [0068], lines 3-4 replace the sentence " The following Table I provides a truth table of how the data edge bits." with "The following Table I provides a truth table of the data edge bits."

TERMINAL DISCLAIMER

2. The terminal disclaimer filed on 16 November 2006 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US

Patent 6,859,107 B1 has been reviewed and is accepted. The terminal disclaimer has been recorded.

DRAWINGS

3. This application has been filed with informal drawings, which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The instant application discloses a method and receiver apparatus for receiving data. The closest prior art of record is co-owned US Patent 6,859,107 B1. A search of prior art records has failed to teach or suggest alone or in combination:

"a method of receiving data comprising the acts of: generating a data sampling clock signal comparing a received clock signal to the data sampling clock signal using the data sampling clock signal to sample a data signal into sampled data representing a first zone, a second zone, and a third zone of the data signal; determining which zone of the sampled data has a transition of the data signal indicating a direction of change for the data sampling clock signal if the first zone or the third zone has the transition" as disclosed in claim 1.

"a receiver apparatus comprising a phase locked loop circuit including a voltage controlled oscillator used to generate a data sampling clock signal; a data sampler to receive the data sampling clock signal, to sample a data signal using the data sampling clock signal, wherein the frequency of the data sampling clock signal is three times greater than the data signal frequency, and to output sampled data representing a first zone, a second zone, and a third zone of the data signal; a phase detector to examine the sampled data, to determine which zone of the sampled data has a transition of the data signal, and to output a phase detector signal indicating a direction of change for the data sampling clock signal if the first zone or the third zone has the transition; and a frequency comparator that compares the frequencies of the data sampling clock produced by the voltage controlled oscillator and a reference clock signal" as disclosed in claim 10.

“a method of controlling a receiver to receive data comprising the steps of: generating a data sampling clock signal; sampling a data signal using the data sampling clock signal, wherein the frequency of the data sampling clock signal is three times greater than the data signal frequency, and outputting sampled data representing a first zone, a second zone, and a third zone of the data signal; detecting the sampled data, to determine which zone of the sampled data has a transition of the data signal, and to output a phase detector signal indicating a direction of change for the data sampling clock signal if the first zone or the third zone has the transition; and comparing the frequencies of the data sampling clock and a reference clock signal” as disclosed in claim 20.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
